New Position Paper on CPVC Fittings

The Plastics Pipe Institute (PPI) has published a new Position Paper related to fittings used in CPVC systems.

The Position Paper: "Installation of CPVC Fittings Within and Under Concrete Slabs" explains how PPI promotes allowing individual manufacturers the right to recommend the use of fittings in locations such as within walls, above ceilings, and within or under poured concrete slabs, either for repair purposes or as per design. CPVC fittings are included in product standards ASTM D2846 and CSA B137.6.

PPI also encourages the removal of code restrictions against such installations, allowing individual manufacturers the right to recommend this practice where deemed appropriate.

This Position Paper was published in December 2016 and can be accessed directly by by visiting this link:
